

Install your hoist
easily and **safely**
with the Argo kit!

Installation on scaffold attachment

Installation on internal prop

The ARGO lifting kit for hoists is the IMER solution for installing the hoist on scaffold attachment or internal prop.

With ARGO the operation can be carried out easily and in complete safety by a single person (for example when it is necessary to fix the hoist to scaffolding at height).

The kit is suitable for all NEO range hoists and previous models without an attachment point, and also for previous versions of internal prop without holes.

Kit composition:

- 1 Hoist lifting winch
- 1 Hoist swivelling extension for scaffold attachment
- 1 Hoist swivelling extension for internal prop
- 1 Attachment point for hoists previous to the NEO range
- 1 Drilling template for previous version of internal prop
- 2 Double ended wrenches 13x17
- 1 Waterproof polyester bag for kit carrying

Tot. weight: 15 kg
